Despite many improvements in road safety, motorcyclists continue to be vulnerable and the roadside safety barrier which has saved many motorists lives, presents a hazard when impacted by motorcyclists. The rider often sustains serious injuries which generally prove fatal. Sharp bends and gradients with changes of direction are particularly hazardous.

BikeGuard, an award winning system, is fully tested to BS EN 1317 part 2 and fully approved by the Highways Agency for use on the UK trunk road network. (“HA Accepted EN1317 Compliant Road Restraint Systems” - Miscellaneous Section). BikeGuard is a high quality, lower steel beam that can be attached to “W” beam type safety barriers and Open Box Beam systems to improve the safety performance of these barriers when impacted by motorcyclists.

Used extensively throughout the UK, BikeGuard prevents motor cycles and particularly their riders from sliding under the barrier and becoming snagged on the barrier support posts. This considerably reduces the extent of motorcyclist injuries and is a product endorsed by both coroners and emergency services.

BikeGuard is manufactured in galvanised steel, and is fixed to the barrier with specially shaped brackets which attach to the rear of the barrier rail, allowing the BikeGuard to perform independently of the barrier during impact. The BikeGuard system utilises slotted holes and a hanging bracket to enable horizontal and vertical adjustment. The brackets are secured to the back of the barrier with purpose designed fixings to suit different barrier types. The system is available in 370mm deep X 2400mm & 4800mm (effective) long beams and a 300mm deep X 2400mm (effective) long beam.

BikeGuard is installed at numerous locations throughout the UK where accidents involving motorcyclists had previously resulted in death or serious injury. Since installing BikeGuard there have been accidents involving motorcyclists at these sites but no injuries have been reported. BikeGuard is available for installation now. Highway Care Limited will survey potential sites and offer design advice as part of our commitment to Highway Safety.
